-1- SUBUNIT: Homoterramer (By similarity).
-1- SUBCELLUIAR LOCATION: Cytoplasmic.
-1- SIMILARITY: Belongs to the zinc-containing alcohol dehydrogenase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Yeast 14:1311-1325(1998).
-!- FUNCTION: CONVERIS ETHANOL TO ACETALDEHYDE.
-!- CATALYTIC ACTIVITY: An alcohol + NAD(+) = an aldehyde or ketone
                                                                                                                                                                                                                                                                                                                                                                            Cho J.Y., Jeffries T.W.; "Pichia stiplis genes for alcohol dehydrogenase with fermentative and respiratory functions.";

SUBUNT: Homotekramer (By similarity).
SUBCELLULAR LOCATION: Cytcoplasmic.
SUBCELLULAR LOCATION: Cytcoplasmic.
SIMILARITY: Belongs to the zinc-containing alcohol dehydrogenase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CATALYTIC ACTIVITY: An alcohol + NAD(+) = an aldehyde or ketone

Probable NADP-dependent oxidoreductase P2 (EC 1.-..-).
P2 OR ATSG16990 OR PZK13_140.
Arabidopsis thalians (Nousean cress).
Eukaryota; Viridiplantae; Streptophyta; Embryophyta; Tracheophyta;
Spermatophyta; Magnoliophyta; eudicotyledons; core eudicots; Rosidae;
eurosida II; Brassicales; Brassicacese; Arabidopsis.
                                                   DETOXIFICATION OF XENOBIOTICS (BY SIMILARITY).

CATALYTIC ACTIVITY: NADPH + quinone = NADP(+) + semiquinone.
SUBUNIT: Homotetramer (By similarity).
SUBCELLULAR LOCATION: Cytoplasmic.
SIMILARITY: Belongs to the zinc-containing alcohol dehydrogenase family. Quinone oxidoreductase subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         STRAIN=cv. Columbia, MEDLINE=96064691; PubMed=7592828; Bablychuk E., Kushnir S., Bellee-Boix E., van Montagu M., Inze D.; "Arabidopsis thaliana NADPH oxidoreductase homologs confer tolerance of yeasts toward the thiol-oxidizing drug diamide."; J. -1- PATHWAY: Threonine catabolism; first step.
-1- SUBUNIT: Homoterramer (By similarity).
-1- SUBCELLULAR LOCATION: Cytoplasmic (By similarity).
-1- SIMILARITY: Belongs to the zinc-containing alcohol dehydrogenase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          52; Mismatches 147; Indels 118; Gaps

"Complete sequence and gene organization of the genome of a hyper-
thermophilic archaebacterium, Pyrococcus horikoshii OT3.";
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   oxobutanoate + NADH.

COFACTOR: Binds 2 zinc ions per subunit (By similarity).

PATHWAY: Threonine catabolism; first step.

SUBCELLULAR LOCATION: Cytoplasmic (By similarity).

SIMILARITY: Belongs to the zinc-containing alcohol dehydrogenase
                                                                                                                                                                                                                                                                                                                                                                                                                                                     DNA Res. 5:55-76(1998).
-!- CATALYTIC ACTIVITY: L-threonine + NAD(+) = L-2-amino-3-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            : |::::

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  COFACTOR: Binds 2 zinc ions per subunit (By similarity).
ENZYME REGULATION: SUBSTRATE INHIBITION IS NOT OBSERVED WITH ANY
A LACOHOLS, AND THE ENZYME-NADH DISSOCIATION IS NOT CONSIDERED TO E
A RATE-LIMITING STEP.
SIMILARITY: Belongs to the zinc-containing alcohol dehydrogenase
family.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       oxobutanoate + NADH.
-!- COFACTOR: Binds 2 zinc ions per subunit (By similarity).
-!- PATHWAY: Threonine catabolism; first step.
-!- SUBUNIT: Homotetramer (By similarity).
-!- SUBCELLULAR LOCATION: Cytoplasmic (By similarity).
-!- SUMILARITY: Belongs to the zinc-containing alcohol dehydrogenase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       "Genome sequence of enterohaemorrhagic Escherichia coli O157:H7.";
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   TIGRFAMS; TIGROUGSZ; cum, 1.
